       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DB BG

Binds to the consensus DNA sequence: 5'-GA[GT]AN[CG][AG]CC-3'. Might protect cells from apoptosis. Might be involved in pre-mRNA splicing (By similarity).

SUBCELLULAR LOCATION: Nuclear with a speckled distribution.
                                                                                                                                                                            MISCELLANEOUS: Colocalizes with the pre-mRNA splicing

-!- FUNCTION: BINDS IN VITRO TO CENTROMERES AND MICROTUBULES. IT IS
CENTROMERE DNA-CBF3-BINDING FACTOR AND IS INVOLVED IN MITOTIC
CHROMOSOME SEGREGATION. IT IS ESSENTIAL FOR CELL GROWTH. MAY BE
SOME WAY ASSOCIATED WITH THE CBF3 110 kDa SUBUNIT (CBF3A) (BY
SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CONFLICT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DOMAIN

TISSUE SPECIFICITY: ROD CELLS IN THE RETINA.
DISEASE: Defects in CNGA1 are a cause of autosomal recessive retinitis pigmentosa (ARRP) [MIM:123825], a disease that lead degeneration of retinal photoreceptor cells.
SIMILARITY: BELONGS TO THE CYCLIC NUCLECTIDE-GATED CATION CHUFAMILY.
                                                                                                                                                                                                                                                                                                                                                                         SUBUNIT: HOMOTETRAMER OR HIGHER OLIGOMER. COMPLEX WITH CNG4.

Natl. Acad. Sci. U.S.A. 94:3110-3115(1997).
DISEASE: Defects in TCOF1 are the cause of Treacher Collins syndrome (TCS) [MIM:154500]. TCS is an autosomal dominant disorder of craniofacial development that occurs with an incidence of 1/50,000 live births. The clinical features of TCS are bilaterally symmetrical and include: (1) abnormalities of the external ears, atresia of the external ear canals, and malformation of the middle ear ossicles, which may result in conductive hearing loss; (2) lateral downward sloping of palpebral fissures, frequently with colobomas of the lower eyelids; (3) hypoplasia of the mandible and zygomatic complex; (4) cleft palate.

SIMILARITY: Contains 1 LisH domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       E=97250498; PubMed=9096354;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score
